Lab Objective

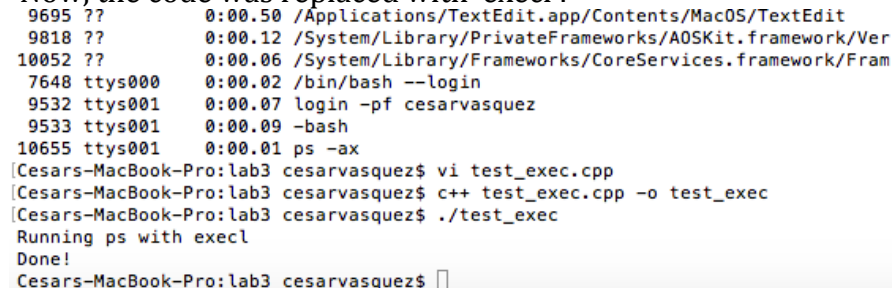

- 1. Replacing a process image:
- 2. Duplicating a process image:
- 3. Waiting for a process:
- 4. Signals

-1. Replacing a process image:

-Below it's the code with 'execvp' code:

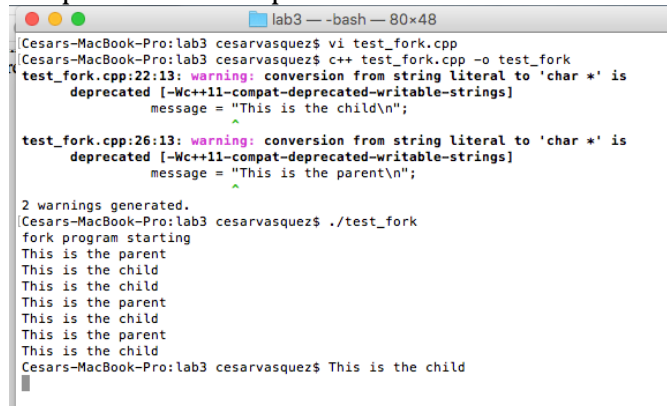

-Now, the code was replaced with 'execl':

-2. Duplicating a process image:

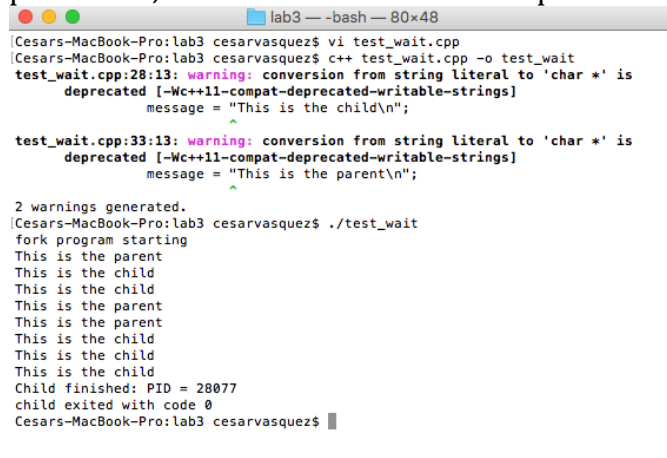

-Below is a screen shot of the code executing. The console displays when the process is a parent or child process.

```
lab3 -- -bash-- 80x48
Cesars-MacBook-Pro:lab3 cesarvasquez$ vi test_fork.cpp
Cesars-MacBook-Pro:lab3 cesarvasquez$ c++ test_fork.cpp -o test_fork
test_fork.cpp:22:13: warning: conversion from string literal to 'char *' is
      deprecated [-Wc++11-compat-deprecated-writable-strings]
      message = "This is the child\n";
              ^
test_fork.cpp:26:13: warning: conversion from string literal to 'char *' is
      deprecated [-Wc++11-compat-deprecated-writable-strings]
      message = "This is the parent\n";
              ^
2 warnings generated.
Cesars-MacBook-Pro:lab3 cesarvasquez$ ./test_fork
fork program starting
This is the parent
This is the child
This is the child
This is the parent
This is the child
This is the parent
This is the child
Cesars-MacBook-Pro:lab3 cesarvasquez$ This is the child
```

-3. Waiting for a Process:

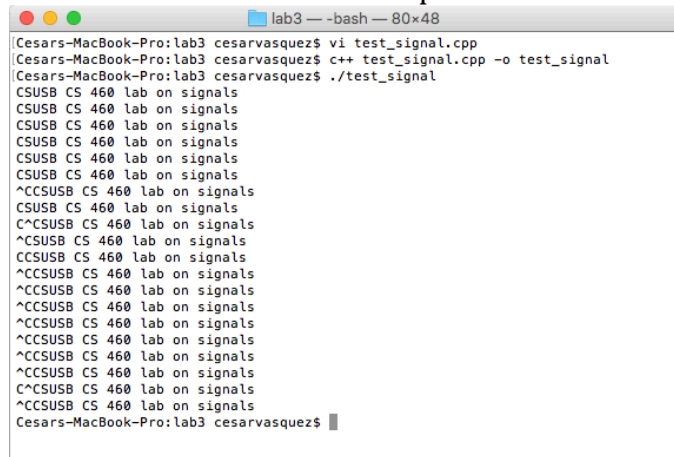

The code of this section is almost the same from the previous section, but the difference is that the parent waits for the child to finish. Then, the parent prints its process ID, and the code terminates. A picture is provide below:

```
lab3 -- -bash-- 80x48
Cesars-MacBook-Pro:lab3 cesarvasquez$ vi test_wait.cpp
Cesars-MacBook-Pro:lab3 cesarvasquez$ c++ test_wait.cpp -o test_wait
test_wait.cpp:28:13: warning: conversion from string literal to 'char *' is
      deprecated [-Wc++11-compat-deprecated-writable-strings]
      message = "This is the child\n";
              ^
test_wait.cpp:33:13: warning: conversion from string literal to 'char *' is
      deprecated [-Wc++11-compat-deprecated-writable-strings]
      message = "This is the parent\n";
              ^
2 warnings generated.
Cesars-MacBook-Pro:lab3 cesarvasquez$ ./test_wait
fork program starting
This is the parent
This is the child
This is the child
This is the parent
This is the parent
This is the child
This is the child
This is the child
Child finished: PID = 28077
child exited with code 0
Cesars-MacBook-Pro:lab3 cesarvasquez$
```

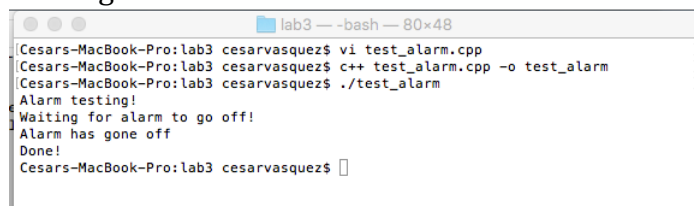

-4. Signals:

-The print screen of the code is below. When '^C' was press noting was happening because the code had a for loop with a limit of 20 times.

```
lab3 — -bash — 80x48
Cesars-MacBook-Pro:lab3 cesarvasquez$ vi test_signal.cpp
Cesars-MacBook-Pro:lab3 cesarvasquez$ c++ test_signal.cpp -o test_signal
Cesars-MacBook-Pro:lab3 cesarvasquez$ ./test_signal
CSUSB CS 460 lab on signals
CSUSB CS 460 lab on signals

^CCSUSB CS 460 lab on signals
^CCSUSB CS 460 lab on signals
Cesars-MacBook-Pro:lab3 cesarvasquez$
```

-Now, for 'test_alarm', the code being executed is below. This occurs because fork is executed then it is stopped with sleep then re-executed with return 1. Finally, the void signal is send and the alarms is executed.

```
lab3 — -bash — 80x48
Cesars-MacBook-Pro:lab3 cesarvasquez$ vi test_alarm.cpp
Cesars-MacBook-Pro:lab3 cesarvasquez$ c++ test_alarm.cpp -o test_alarm
Cesars-MacBook-Pro:lab3 cesarvasquez$ ./test_alarm
Alarm testing!
Waiting for alarm to go off!
Alarm has gone off
Done!
Cesars-MacBook-Pro:lab3 cesarvasquez$
```

-Summary:

This lab was kind of difficult, but I will still give my self 20/20.
